## Hydraulic pumps

Quality design pumps complete with a special lowering valve allow controlled rate of descent, and an overload bypass valve.

Galvanized Jacks have Galvanized pumps and Stainless Steel Jacks have Stainless pumps. The Heavy Duty Jack pump is leak proof with overload capacity. The maintenance free pump features a hard chrome plated lift cylinder & piston, quality polyurethane seals & wipers, and an easy to remove cartridge design. A unique Pump Piston Dust Cover prevents damage to the top seal from dust and debris. New additional foot release pedal provides operation versatility.

## Steering

200 degree pivot action allows greater maneuverability with polyurethane wheels, sealed bearings and "ball-thrust" steering.

The Low Profile Jacks have 6" wheels and the Heavy Duty Jacks have an articulating axle which allows for level transport of loads on uneven floors.

## Frames

Rugged heavy duty frames of steel, galvanized steel or stainless steel are constructed of one-piece formed channel, offer light weight and strength. Heavy Duty Jacks feature reinforced gussets and reinforced bulkhead headers which provide increased strengthened piston seat.

## Forks

Reinforced forks provide added strength with tapered ends for easy pallet entry. Heavy Duty Jacks feature one piece forks and solid tapered ends for increased strength.

## Handles

Featuring a reinforced base, the spring-a-matic handle returns to the upright position automatically.

The Heavy Duty Jack has a tapered handle for greater strength.

Control handles have three position (raise/neutral/ lower) fingertip controls which are ergonomically designed and free of pinch points.

The Heavy Duty Jack is designed for left or right hand operators.
